Yosua Yuwono

PRODUCT ENGINEER & FRONTEND DEVELOPER

Surabaya, Indonesia / hello@yosuayuwono.com / github.com/yosuyuwo / linkedin.com/in/yosuyuwo

SUMMARY

Product engineer with five years of building web products end to end: UX research, UI design, frontend, backend and deployment. Co-founder of Quanta Labs, a product studio, and Techova Labs, an AI automation SaaS; previously nearly three years at Morfolabs shipping tens of client products. Builds with AI agents every day, then reviews and QAs every change by hand: the goal is work polished enough that people are surprised AI was involved at all.

EXPERIENCE

Co-founder, Product Engineer

Aug 2026 - Present

Techova Labs

- Co-founded a SaaS company building AI automation apps, one per business workflow.
- Building Terbit, which turns one article or script into Instagram carousels, posts and stories fitted to each brand's own template.

Co-founder, Product Engineer

Jan 2026 - Present

Quanta Labs

- Co-founded a product studio that takes client ideas from first brief to launch.
- Designed and built Gaiana's rental storefront and back-office end to end, moving the business off spreadsheets and shared drives and going live five months after the first commit.
- Delivered a freight management system, customer-side shipment tracking and a landing page for Eastern Star Logistics.
- Build with AI agents (Claude Code) in a spec, prototype, test-first pipeline, recording every decision and reviewing and QA-ing each change by hand before it ships.
- Run production on a self-managed server: CI-built images, nightly deploys, backups with restore drills, monitoring and alerts.

UI & Frontend Engineer → Product Engineer

Aug 2023 - May 2026

Morfolabs

- Planned and built tens of client web products with the tech lead, from the features clients asked for through to delivery.
- Most of that client work is under NDA and can't be shown; the public pieces include Asosiasi Blockchain Indonesia's landing page and reporting portal, Elevate Former's studio booking site and the Morfolabs company site.
- Reviewed outsourced work to keep it working and on course, and built internal tools for the company.
- Grew from implementing finished UI designs to owning what was built and why.

Designer & Frontend Developer (contract)

Apr 2022 - Oct 2022

Centrum Ivan Merz

- Designed and built a learning platform for mostly older learners, starting from UX research into how they read and move through a screen.

Frontend Developer (internship program)

Jun 2021 - Oct 2021

Kantin Sehat (outclass.id)

- Built a mobile-first school canteen payment app from scratch in a team of four; parents could see what their children bought.

Game Designer & Frontend Developer

Jun 2021 - Oct 2021

Widya Mandala Accounting Games

- Designed and built three real-time web games for a university accounting event, plus a Socket.IO admin panel for live rooms and quiz editing.

SELECTED PROJECTS

Gaiana 2026
Design, Frontend & Backend / gaiana.id
Dress rental and sale storefront in Surabaya. Designed and built end to end, from catalogue to checkout to operations.
Stack: Next.js, shadcn/ui, Prisma, tRPC, PostgreSQL, GSAP, Nuqs, Zod, Claude

Wilmot's Warehouse 2026
Frontend / wilmots-warehouse-landing.vercel.app
Unofficial promotional landing page for the co-op board game Wilmot's Warehouse, where the visitor learns the rules by playing.
